

Funding Landscape for AI & Machine Learning

JAN 25

In response to rapid advances in Artificial Intelligence and Machine Learning, this session will provide a primer on relevant funding trends for grant-seekers. We will cover recent funding priorities from major federal agencies and other funders as they relate to this field, while also highlighting notable programs through which grants are being awarded.

Responding to NSF Dear Colleague Letters

APR 25

The National Science Foundation (NSF) regularly issues Dear Colleague Letters to encourage applicants for existing grant programs to emphasize areas of special interest to the agency. In this webinar, we will provide an overview of this practice and discuss how grant-seekers can ensure they are responsive to these interests while developing competitive grant proposals.

Writing Your Data Management Plan

FEB 29

A strong Data Management Plan (DMP) demonstrates how you will manage data generated over the course of your research project. In this session, we will cover the key components of Data Management Plans, in addition to providing tips for ensuring that you are putting in place a comprehensive and persuasive plan. We will also touch specifically on recent agency guidance for DMPs, including new requirements from the National Institutes of Health (NIH).

Engaging Collaborators to Enhance Your Proposal

MAY 23

Contributions from partners, stakeholders, and collaborators are often central to the success of a grant application because they can provide the vital expertise, buy-in, and resources needed to effectively execute your project. In this session we will review profiles of different key collaborators in the grant development process, looking at what they bring to the table and how you can best draw them into your orbit.

Navigating the Grant Review Process (and Becoming a Reviewer)

MAR 28

What happens to your proposal after you hit submit? In this session, we will cover the process that funders use to review, evaluate, and select grant awards. The webinar will cover common conventions in the grant review process in addition to funder-specific insights for different types of grantmakers. Finally, we will also touch on the process for becoming a grant reviewer.

Grant Academy Roundtable: Launching Competitive Grantseekers

JUN 27

Through Hanover's Grant Academy services, our team collaborates with a wide range of institutions to support faculty in the early stages of building their research careers. In this session, our team will review major insights and best practices that institutions can consider in creating faculty development programs focused on grant writing.

Storytelling in Grantwriting

JUL 25

The heart of any successful grant proposal is a compelling and convincing narrative. In this session, we will dive into the art of storytelling as it relates to the grant writing process and explore how principal investigators can bring their proposals to life by applying storytelling principles and practices in their writing.

Introduction to Grantseeking for Administrators

AUG 29

Administrators play a pivotal role at their institutions in facilitating proposal development, grant submission, and project management. This session will provide a primer on the Grants world through the lens of these professionals, looking at how they can best support their colleagues in the pursuit and management of grant funding.

Scaling Up Your Research

SEP 26

Many researchers who have experienced initial funding success are faced with the same question – where do I go from here? This session will focus on grant-seekers who are aiming to expand the scale of their research, whether it's broadening the scope of their work, adapting to target-larger scale grant opportunities, or exploring collaborations across disciplinary lines.

What Deadline?! Keeping Yourself & Others On-Task in Grant Development

OCT 31

Nobody enjoys the last-minute scramble to complete a project, and while not all funders give grant-seekers the benefit of time to develop their proposals, forward planning and savvy management can lead to much stronger grant applications. In this session, Hanover will share best practices for managing the different phases of grant development, including ways to keep yourself and your team working towards important project milestones.

Integrating Theoretical Frameworks into Grant Proposals

NOV 21

The integration of theoretical frameworks into a grant narrative can strengthen the rationale and impact of your project. This session will dive into the importance of theoretical frameworks, the selection the appropriate framework for your proposal, and the art of seamlessly weaving your framework into a proposal narrative.

Communicating the Impacts of Your Research

DEC 19

This webinar will focus on helping researchers articulate the significance and broader implications of their work, including an overview of research impacts, the importance of dissemination, and methods for communicating impact. Specifically, we will cover how publications, presentations, stakeholder engagement, and broad public dissemination should factor into your plans.
